

## QUICKVUE COVID-19 HOME TEST KIT

This QuickVue home test is authorized for nonprescription home use for individuals aged 2 years or older. The test can be used for individuals within 6-days of symptom onset or individuals without symptoms or other medical reasons to suspect COVID-19 infection when tested twice over three days with at least 24 hours (and no more than 48 hours) between tests.

COVID-19 self-tests (also referred to as home tests or over-the-counter (OTC) tests) are **ONE** of many risk-reduction measures, along with vaccination, masking, and physical distancing, that protect you and others by reducing the chances of spreading SARS-CoV-2, the virus that causes COVID-19.

- You can use self-tests, regardless of vaccination status, or whether or not you have symptoms.
- Follow all of the manufacturer's instructions for performing the test.
- If you test positive, you should isolate and inform your healthcare provider, as well as the Suquamish Tribe Community Health Office and any close contacts. If Tribal offices are closed positive home rapid tests **MUST** be reported to the WA St. COVID-19 hotline at 1-800-525-0127.
- Consider using a self-test before joining indoor gatherings with others who are not in your household.
- A positive self-test result means that the test detected the virus, and you are very likely to have an infection and should stay home or isolate for 10 days, wear a mask if you could have contact with others, and avoid indoor gatherings to reduce the risk of spreading disease to someone else.

A negative self-test result means that the test did not detect the virus and you **MAY** not have an infection, **BUT** it does not rule out infection. **Repeating** the test within a few days, with at least 24 hours between tests, will increase the confidence that you are not infected.

Please contact the Community Health Office at (360) 394-8469 for questions, support. The Suquamish COVID PCR Testing site is open M-F 8:30 to 12:00 with the exception of Holidays.
