

## 2023 Clam Harvest Group Rotation Summary

### At every dig, there will be a Primary and Secondary harvest group assigned.

- The Primary group will be guaranteed a 200 lbs quota. They shouldn't receive more than 200 lbs unless there's a low turnout or a total quota in excess of 4,000 lbs.
- Any remainder will be divided equally among the secondary group, up to a maximum of 200 lbs.
- If any pounds remain after the secondary group quota is allocated these remaining pounds will be divided among standby diggers evenly
- There is no guarantee that there will be pounds available for standby diggers
- On lower total quota digs, it is possible for all the pounds to be allocated to group members and no pounds are left for standbys.

### What about diggers who show up but are not assigned a color group?

- A digger without a color group may participate in harvests as a standby digger.
- If a digger without a group participates in TWO clam digs as a standby digger, this digger will be promoted to a color group.
- We will top off each group at eleven as diggers are added

### What about no-shows?

- If a digger does not show up when their group is the designated primary group, several times in a row, their name may be removed from that group. They will need to show up twice to be added to a group again.

### Summary:

Dig	Group Primary (200 LBS IFQ)	Group secondary
1	BLACK	RED
2	RED	ORANGE
3	ORANGE	YELLOW
4	YELLOW	GREEN
5	GREEN	BLUE
6	BLUE	INDIGO
7	INDIGO	VIOLET
8	VIOLET	BLACK
9	BLACK	RED
10	RED	ORANGE
11	ETC....	

**Primary - IFQ is 200 lbs**

**Secondary - remaining lbs divided equally, up to 200 lbs**
